

## Type S27 Safety devices

The **Relief valves S27** are devices which function is to maintain the pressure in the system or in pressure vessels within the limit set for the intervention.

These devices intervene following short-term events, providing to discharge externally a certain quantity of gas when the grid pressure exceeds the calibration pressure, thus avoiding or postponing the intervention of the slam shut devices.

### SPECIFICATIONS

**Body Material:** Aluminium / Iron / Painted

**Inlet Pressure:** 5/10 bar

**Working temperature:** -20 ÷ +60

MADE IN ITALY
